March 25, 2022

Linear Regression 1D: Training Two Parameter Mini-Batch Gradient Decent

Objective

How to use Mini-Batch Gradient Descent to train model.

Table of Contents

In this Lab, you will practice training a model by using Mini-Batch Gradient Descent.

Make Some Data

Create the Model and Cost Function (Total Loss)

Train the Model: Batch Gradient Descent

Train the Model: Stochastic Gradient Descent with Dataset DataLoader

Train the Model: Mini Batch Gradient Decent: Batch Size Equals 5

Train the Model: Mini Batch Gradient Decent: Batch Size Equals 10

Estimated Time Needed: 30 min

Preparation

We'll need the following libraries:

[2]:
```
# Import the libraries we need for this lab

import numpy as np
import matplotlib.pyplot as plt
from mpl_toolkits import mplot3d
```

The class plot_error_surfaces is just to help you visualize the data space and the parameter space during training and has nothing to do with PyTorch.

[3]:
```
# The class for plotting the diagrams

class plot_error_surfaces(object):

    # Constructor
    def __init__(self, w_range, b_range, X, Y, n_samples = 30, go = True):
        W = np.linspace(-w_range, w_range, n_samples)
        B = np.linspace(-b_range, b_range, n_samples)
```

```
        w, b = np.meshgrid(W, B)
        Z = np.zeros((30, 30))
        count1 = 0
        self.y = Y.numpy()
        self.x = X.numpy()
        for w1, b1 in zip(w, b):
            count2 = 0
            for w2, b2 in zip(w1, b1):
                Z[count1, count2] = np.mean((self.y - w2 * self.x + b2) ** 2)
                count2 += 1
            count1 += 1
        self.Z = Z
        self.w = w
        self.b = b
        self.W = []
        self.B = []
        self.LOSS = []
        self.n = 0
        if go == True:
            plt.figure()
            plt.figure(figsize = (7.5, 5))
            plt.axes(projection = '3d').plot_surface(self.w, self.b, self.Z,␣
↪rstride = 1, cstride = 1, cmap = 'viridis', edgecolor = 'none')
            plt.title('Loss Surface')
            plt.xlabel('w')
            plt.ylabel('b')
            plt.show()
            plt.figure()
            plt.title('Loss Surface Contour')
            plt.xlabel('w')
            plt.ylabel('b')
            plt.contour(self.w, self.b, self.Z)
            plt.show()

    # Setter
    def set_para_loss(self, W, B, loss):
        self.n = self.n + 1
        self.W.append(W)
        self.B.append(B)
        self.LOSS.append(loss)

    # Plot diagram
    def final_plot(self):
        ax = plt.axes(projection = '3d')
        ax.plot_wireframe(self.w, self.b, self.Z)
        ax.scatter(self.W, self.B, self.LOSS, c = 'r', marker = 'x', s = 200,␣
↪alpha = 1)
```

```
        plt.figure()
        plt.contour(self.w, self.b, self.Z)
        plt.scatter(self.W, self.B, c = 'r', marker = 'x')
        plt.xlabel('w')
        plt.ylabel('b')
        plt.show()

    # Plot diagram
    def plot_ps(self):
        plt.subplot(121)
        plt.ylim()
        plt.plot(self.x, self.y, 'ro', label = "training points")
        plt.plot(self.x, self.W[-1] * self.x + self.B[-1], label = "estimated␣
↪line")
        plt.xlabel('x')
        plt.ylabel('y')
        plt.title('Data Space Iteration: '+ str(self.n))
        plt.subplot(122)
        plt.contour(self.w, self.b, self.Z)
        plt.scatter(self.W, self.B, c = 'r', marker = 'x')
        plt.title('Loss Surface Contour')
        plt.xlabel('w')
        plt.ylabel('b')
        plt.show()
```

Make Some Data

Import PyTorch and set random seed:

[4]:
```
# Import PyTorch library

import torch
torch.manual_seed(1)
```

[4]:
```
<torch._C.Generator at 0x7f01c71ad1b0>
```

Generate values from -3 to 3 that create a line with a slope of 1 and a bias of -1. This is the line that you need to estimate. Add some noise to the data:

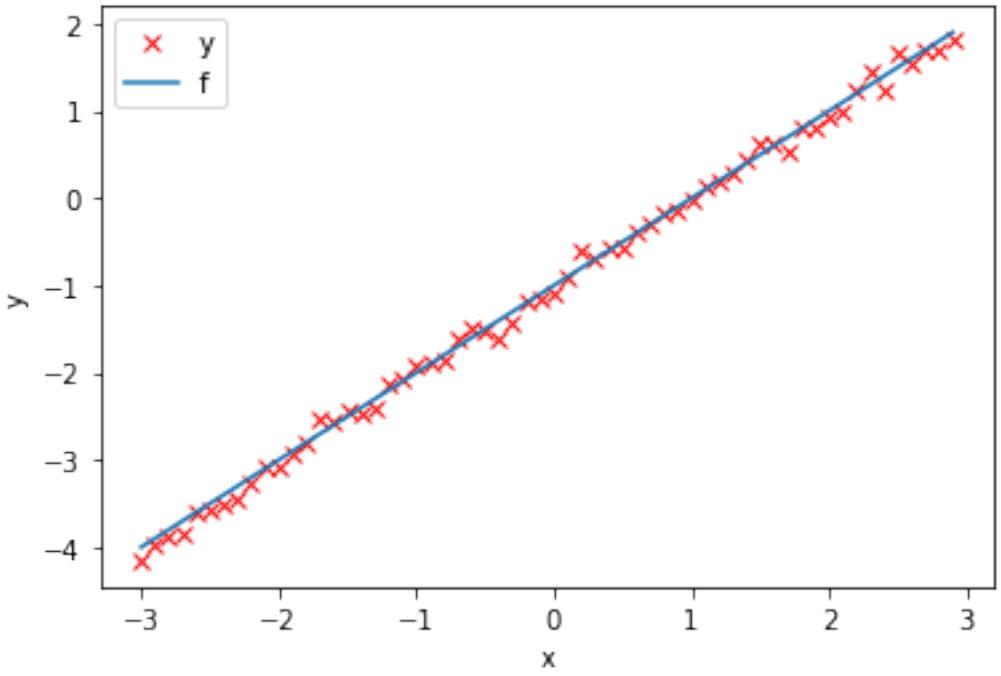
[5]:
```
# Generate the data with noise and the line

X = torch.arange(-3, 3, 0.1).view(-1, 1)
f = 1 * X - 1
Y = f + 0.1 * torch.randn(X.size())
```

Plot the results:

[6]:
```
# Plot the line and the data

plt.plot(X.numpy(), Y.numpy(), 'rx', label = 'y')
plt.plot(X.numpy(), f.numpy(), label = 'f')
plt.xlabel('x')
plt.ylabel('y')
plt.legend()
plt.show()
```



Create the Model and Cost Function (Total Loss)

Define the forward function:

[7]:
```
# Define the prediction function

def forward(x):
    return w * x + b
```

Define the cost or criterion function:

[8]:
```
# Define the cost function

def criterion(yhat, y):
    return torch.mean((yhat - y) ** 2)
```

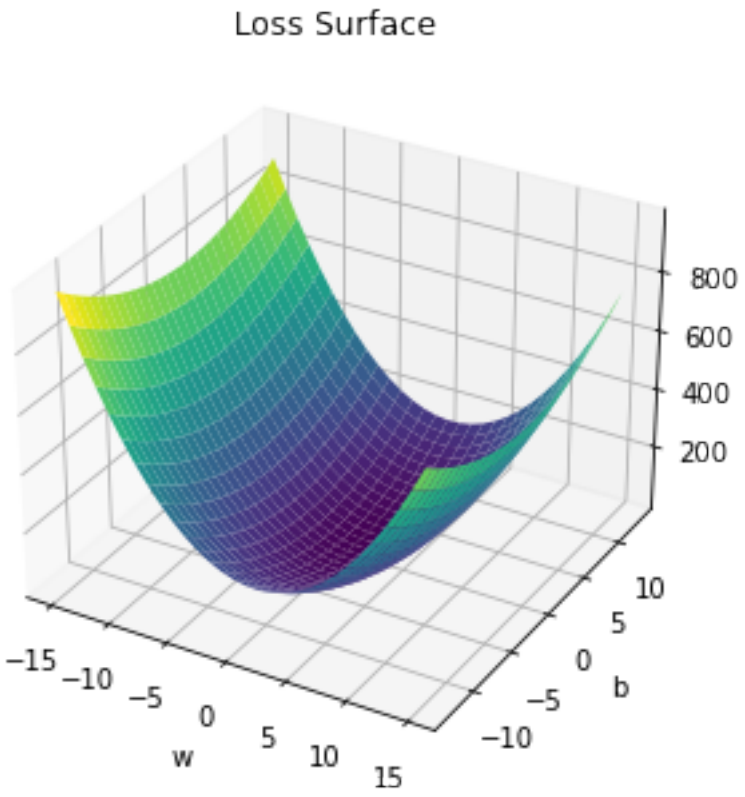
Create a plot_error_surfaces object to visualize the data space and the parameter space during

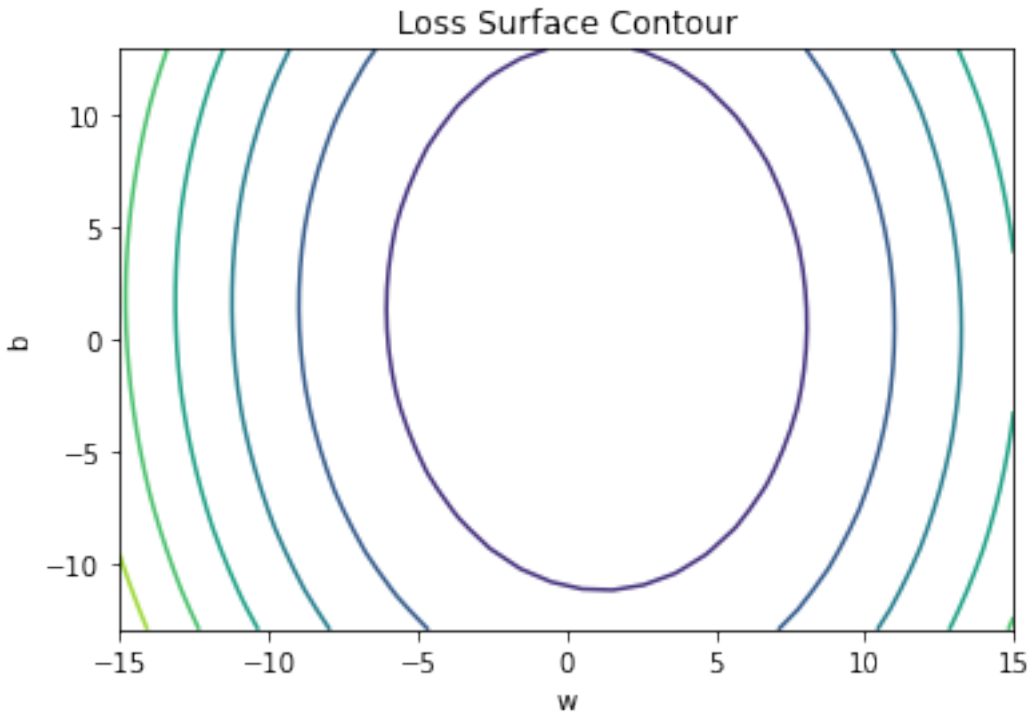
training:

[9]:
```
# Create a plot_error_surfaces object.

get_surface = plot_error_surfaces(15, 13, X, Y, 30)
```

```
<Figure size 432x288 with 0 Axes>
```





Train the Model: Batch Gradient Descent (BGD)

Define train_model_BGD function.

[10]:
```
# Define the function for training model

w = torch.tensor(-15.0, requires_grad = True)
b = torch.tensor(-10.0, requires_grad = True)
lr = 0.1
LOSS_BGD = []

def train_model_BGD(epochs):
    for epoch in range(epochs):
        Yhat = forward(X)
        loss = criterion(Yhat, Y)
        LOSS_BGD.append(loss)
        get_surface.set_para_loss(w.data.tolist(), b.data.tolist(), loss.
 ↪tolist())
        get_surface.plot_ps()
        loss.backward()
        w.data = w.data - lr * w.grad.data
        b.data = b.data - lr * b.grad.data
        w.grad.data.zero_()
        b.grad.data.zero_()
```

Run 10 epochs of batch gradient descent: bug data space is 1 iteration ahead of parameter space.

[11]:
```
# Run train_model_BGD with 10 iterations

train_model_BGD(10)
```

Stochastic Gradient Descent (SGD) with Dataset DataLoader

Create a plot_error_surfaces object to visualize the data space and the parameter space during training:

[12]:
```
# Create a plot_error_surfaces object.

get_surface = plot_error_surfaces(15, 13, X, Y, 30, go = False)
```

Import Dataset and DataLoader libraries

[13]:
```
# Import libraries

from torch.utils.data import Dataset, DataLoader
```

Create Data class

[14]:
```
# Create class Data

class Data(Dataset):

    # Constructor
    def __init__(self):
        self.x = torch.arange(-3, 3, 0.1).view(-1, 1)
        self.y = 1 * X - 1
```

```
        self.len = self.x.shape[0]

    # Getter
    def __getitem__(self, index):
        return self.x[index], self.y[index]

    # Get length
    def __len__(self):
        return self.len
```

Create a dataset object and a dataloader object:

[15]:
```
# Create Data object and DataLoader object

dataset = Data()
trainloader = DataLoader(dataset = dataset, batch_size = 1)
```

Define train_model_SGD function for training the model.

[16]:
```
# Define train_model_SGD function

w = torch.tensor(-15.0, requires_grad = True)
b = torch.tensor(-10.0, requires_grad = True)
LOSS_SGD = []
lr = 0.1
def train_model_SGD(epochs):
    for epoch in range(epochs):
        Yhat = forward(X)
        get_surface.set_para_loss(w.data.tolist(), b.data.tolist(),␣
 ↪criterion(Yhat, Y).tolist())
        get_surface.plot_ps()
        LOSS_SGD.append(criterion(forward(X), Y).tolist())
        for x, y in trainloader:
            yhat = forward(x)
            loss = criterion(yhat, y)
            get_surface.set_para_loss(w.data.tolist(), b.data.tolist(), loss.
 ↪tolist())
            loss.backward()
            w.data = w.data - lr * w.grad.data
            b.data = b.data - lr * b.grad.data
            w.grad.data.zero_()
            b.grad.data.zero_()
        get_surface.plot_ps()
```

Run 10 epochs of stochastic gradient descent: bug data space is 1 iteration ahead of parameter space.

[17]:
```
# Run train_model_SGD(iter) with 10 iterations

train_model_SGD(10)
```

Mini Batch Gradient Descent: Batch Size Equals 5

Create a plot_error_surfaces object to visualize the data space and the parameter space during training:

[18]:
```
# Create a plot_error_surfaces object.

get_surface = plot_error_surfaces(15, 13, X, Y, 30, go = False)
```

Create Data object and create a Dataloader object where the batch size equals 5:

[19]:
```
# Create DataLoader object and Data object

dataset = Data()
trainloader = DataLoader(dataset = dataset, batch_size = 5)
```

Define train_model_Mini5 function to train the model.

[20]:
```
# Define train_model_Mini5 function

w = torch.tensor(-15.0, requires_grad = True)
b = torch.tensor(-10.0, requires_grad = True)
LOSS_MINI5 = []
lr = 0.1
```

```
def train_model_Mini5(epochs):
    for epoch in range(epochs):
        Yhat = forward(X)
        get_surface.set_para_loss(w.data.tolist(), b.data.tolist(),␣
 ↪criterion(Yhat, Y).tolist())
        get_surface.plot_ps()
        LOSS_MINI5.append(criterion(forward(X), Y).tolist())
        for x, y in trainloader:
            yhat = forward(x)
            loss = criterion(yhat, y)
            get_surface.set_para_loss(w.data.tolist(), b.data.tolist(), loss.
 ↪tolist())
            loss.backward()
            w.data = w.data - lr * w.grad.data
            b.data = b.data - lr * b.grad.data
            w.grad.data.zero_()
            b.grad.data.zero_()
```

Run 10 epochs of mini-batch gradient descent: bug data space is 1 iteration ahead of parameter space.

[21]:
```
# Run train_model_Mini5 with 10 iterations.

train_model_Mini5(10)
```

Mini Batch Gradient Descent: Batch Size Equals 10

Create a plot_error_surfaces object to visualize the data space and the parameter space during training:

[22]:
```
# Create a plot_error_surfaces object.

get_surface = plot_error_surfaces(15, 13, X, Y, 30, go = False)
```

Create Data object and create a Dataloader object batch size equals 10

[23]:
```
# Create DataLoader object

dataset = Data()
trainloader = DataLoader(dataset = dataset, batch_size = 10)
```

Define train_model_Mini10 function for training the model.

[24]:
```
# Define train_model_Mini5 function

w = torch.tensor(-15.0, requires_grad = True)
b = torch.tensor(-10.0, requires_grad = True)
LOSS_MINI10 = []
```

```
lr = 0.1

def train_model_Mini10(epochs):
    for epoch in range(epochs):
        Yhat = forward(X)
        get_surface.set_para_loss(w.data.tolist(), b.data.tolist(),␣
 ↪criterion(Yhat, Y).tolist())
        get_surface.plot_ps()
        LOSS_MINI10.append(criterion(forward(X),Y).tolist())
        for x, y in trainloader:
            yhat = forward(x)
            loss = criterion(yhat, y)
            get_surface.set_para_loss(w.data.tolist(), b.data.tolist(), loss.
 ↪tolist())
            loss.backward()
            w.data = w.data - lr * w.grad.data
            b.data = b.data - lr * b.grad.data
            w.grad.data.zero_()
            b.grad.data.zero_()
```

Run 10 epochs of mini-batch gradient descent: bug data space is 1 iteration ahead of parameter space.

[25]:
```
# Run train_model_Mini5 with 10 iterations.

train_model_Mini10(10)
```

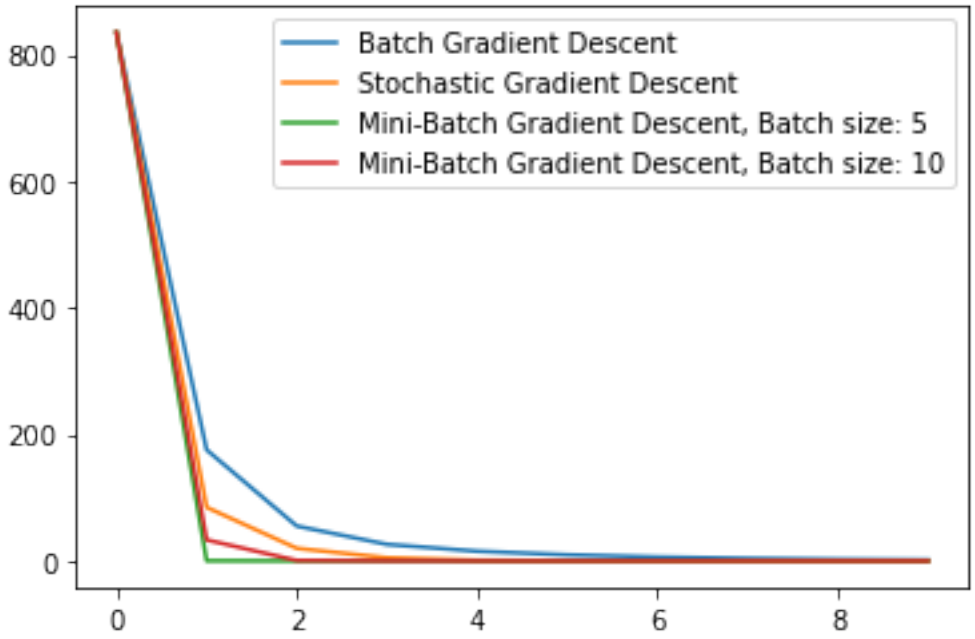
Plot the loss for each epoch:

[28]:
```
# Plot out the LOSS for each method
for i in range(len(LOSS_BGD)):
  LOSS_BGD[i] = LOSS_BGD[i].item()
plt.plot(LOSS_BGD,label = "Batch Gradient Descent")
plt.plot(LOSS_SGD,label = "Stochastic Gradient Descent")
plt.plot(LOSS_MINI5,label = "Mini-Batch Gradient Descent, Batch size: 5")
plt.plot(LOSS_MINI10,label = "Mini-Batch Gradient Descent, Batch size: 10")
plt.legend()
```

[28]:
```
<matplotlib.legend.Legend at 0x7f01c4387c50>
```



Practice

Perform mini batch gradient descent with a batch size of 20. Store the total loss for each epoch in the list LOSS20.

[29]:
```
# Practice: Perform mini batch gradient descent with a batch size of 20.

dataset = Data()
trainloader = DataLoader(dataset = dataset, batch_size = 20)
w = torch.tensor(-15.0, requires_grad = True)
